# ACCESSION+ BY DataRay

- Conveniently prints Send Patient collection labels in the patient draw room, reducing the risk of mixing up accession labels.

- Automatically generates Immediate Collect and Lab Collect labels to eliminate handwritten labels, and to avert the transport of unlabeled tubes.

- Easily prints Room Collect labels in the patient care rooms for non-blood items such as throat swabs, etc.

- Quickly initiates an accession by allowing you to simply scan the barcode the new collections have.

## IN ACTION

1 • A provider enters the collection order into EHR.

2 • The sample is collected and a DataRay Room Collect Label is attached to the vial.* The collection is taken to the lab.

3 • The lab technician scans the barcode on the Room Collect label to access the patient's collection order in the LIS.

4 • Accession+ label is printed and attached to the collection to begin the accession process using the analyzer / biomedical equipment.

   * see DPOCC flyer
