

SCRIPT PRINT BY **DATA RAY**

For EHR / eRx Compliance

Data Ray Prescription Printing Solution features:

- Prints in 3 seconds - No Warm Up Required
- Very Small Footprint
- Rugged, Dependable and Very Quick
- Facilitates Custom Script Formatting and Specifications; quickly and accurately interprets data stream from prescription-writing software
- Tamper-resistant Prescription Paper Provides Compliance with Specific State Laws; Loads Easily Into Printer.

The DataRay Prescription Printing Solution includes thermal printer, software interface, and legally-compliant prescription paper.

Compatible with virtually every EHR including VistA, RPMS, Epic, Meditech, and Cerner.

With the move to electronic health records (EHR), electronic prescriptions - or eRx - is fast becoming the accepted way to generate what was formerly a handwritten prescription process. The DataRay Printing Solution provides much needed patient safety improvements, virtually eliminating prescription errors caused by illegible handwriting.

It also has security features that prevent prescriptions from being copied, altered or counterfeited - vital considerations where public safety and potential liability are concerned.

This advanced prescription printing solution works in conjunction with and facilitates the effective implementation of an EHR/eRx system, and is in compliance with DEA and CMS requirements for tamper-resistant prescriptions. It also meets the additional prescription requirements put into place by individual states (see details on opposite side).

Not all prescriptions will be sent electronically. There will still be a need for a reliable printing solution - one that can even serve as a backup when transmission lines are down.
